FENCING LINE

KALIKOMBAT Mask: # 41601

Homologated protection mask for Philippine Kali and Training Knife Fighting
(without point and no edge)

KALI KOMBAT.IT

Mr Danilo Rossi, Italian Fencing Federation I.S.A.M. coach, after a peculiar search on the best mask available among the Fencing equipment suppliers, picked NEGRINI Fencing Line out as the ideal partner for developing a specific protection mask for Philippine Kali and Training Knife Martial Art disciplines.

This Fencing Mask, homologated by the FIE International Fencing Association, is taken as basis for building the ISAM Mask: specific additional protection parts make this mask completely fulfill Martial Arts Italian Higher Institute requirements.

- BIB RESISTANCE GREATER THAN 1600 N - Guaranteed by metal plate riveted on the side of each mask.
- NEW IMPROVED MATERIALS - Aisi 304 stainless-steel mesh with "DOUBLE UNDULATION" . This is obtained thanks to special process to which the metal wire is subjected, with pre-crimping of both wires that are then interwoven. The resulting wire mesh has a greater resistance to distortions.
- FRAME: made by steel wire that has been made to keep mask's shape once it has adjusted up to one's anatomical needs.
- BIB: set and made to give freedom to head movements however the neck is not exposed. It matches a valuable hand-sewn handicraft work to a deep search for the highest performance standards among all materials available on the present market.
- INTERNAL PADDING and inside of bib covered in washable waterproof material. Bib padding in DYNEMA material with high-resistance to penetration (greater than 1600 NW).
- EXTERNAL shock-proof in special anti-attack/anti-shearing stress rubber binding.
- SAFETY OF ALL COMPONENTS - Safety rivets hold bib firmly onto stainless-steel frame.
- LONG LASTING RUBBER PACKING:
 - Exclusive rubber/steel packing that covers the upper section of the mask; it protects the head from any contact with any metal elements of the frame underneath.
 - ANATOMICAL FIT - Internal padding and wide rear elastic towelling strap are designed to hold the fencer's head firmly, even during the most abrupt movements.
 - EXCLUSIVE SOLUTION - A mask designed for the growing fencer! The size XS mask is obtained by simply attaching, with Velcro®, a padded band on the inside of a size S mask. By completely or partially removing this band, the inside volume of the mask is increased.
- ACCESSORIES: size M - L - XL are prepared for internal ring padding holder, that can be purchased separately, art.IA (included into size XS/S))
